B13	-	-	-	428	860	2

All measurements in mm.

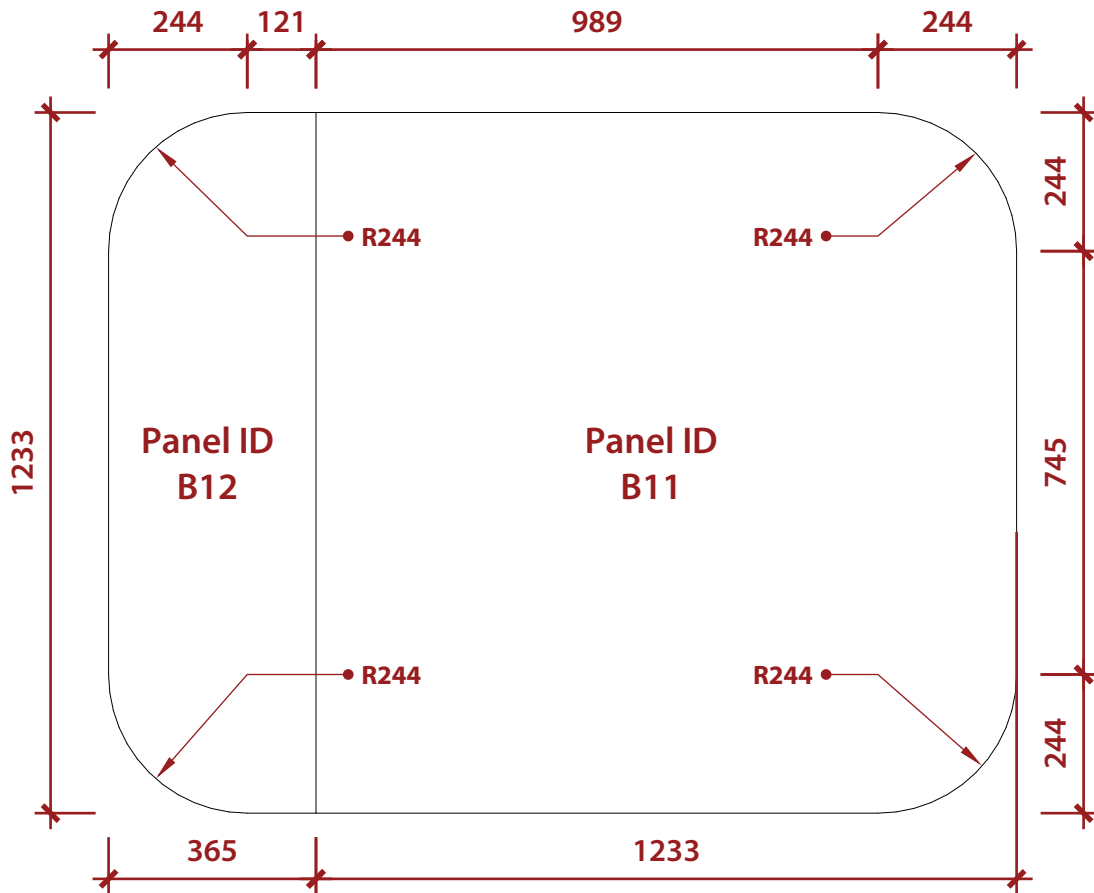

Foamex refers to the recommended panel thickness.

Panel Notes

- ALL** Each panel has a 3.5mm edge inside which the branding fits within, therefore there is a 7mm gap between each branded panel.
- B06** Interior panel is obscured by lighting for 150mm from the right edge of the panel, keep all important branding and text outside of this area.
- B07** Interior panel is obscured by VideoKiosk, keep all important branding and text in the top 750mm of this panel (when in seated orientation).
- B08** Interior panel is obscured by lighting for 150mm from the left edge of the panel, keep all important branding and text outside of this area.

Bench Seat

- B02** The booth can be setup in either a standing or seated arrangement. A bench seat can be added to the booth, this will cover the lower section of the interior panels. Artwork should be provided to the full size for these panels although the bottom 440mm will be hidden behind the bench seat.
- B03**
- B04**
- B13** An additional piece of branding is required for the front of the bench seat.

Artwork Instructions

If you are creating artwork using various software applications, artwork does NOT need to be made to full size.

We recommend creation at 25% of the finished size - please keep dimensions in proportion to the finished artwork size.

Important Notes

All colours within the document should be CMYK - we convert all other colour formats including Pantone colours to CMYK.

Allow 2mm bleed where text or pictures bleed off of edges.

We recommend logos be created in Illustrator, Freehand or Corel Draw and vectorised.

Change any fonts to vectors and save artwork as EPS or native application format. This provides better quality at any size than scanned logos or type.

File Format

HI-RES print ready PDF with trim-marks + 2mm bleed.

Submitting Your Files

Please supply each branding panel as an individual file named by its panel id (for example A02,B06 or C08).

Files can be sent to us using our online transfer tool here: <https://videobooth.wetransfer.com/>

Click "Add Files" and check the address reads incoming@videoboosystems.com

Enter your email address and a project reference in the message field.

Click Transfer.
